STAAD.Pro® V8i
The World’s #1 Structural Analysis and Design Software

STAAD.Pro V8i is a comprehensive and integrated finite element analysis and design offering, including a state-of-the-art user interface, visualization tools, and international design codes. It is capable of analyzing any structure exposed to static loading, a dynamic response, soil-structure interaction, wind, earthquake, and moving loads. STAAD.Pro V8i is the premier FEM analysis and design tool for any type of project including towers, culverts, plants, bridges, stadiums, and marine structures.

Advanced Analysis and Design
With an array of advanced analysis capabilities including linear static, response spectra, time history, cable, and pushover and non-linear analyses, STAAD.Pro V8i provides your engineering team with a scalable solution that will meet the demands of your project every time.

STAAD.Pro V8i will eliminate the countless man-hours required to properly load your structure by automating the forces caused by wind, earthquakes, snow, or vehicles. In addition, no matter what material you are using or what country you are designing your structure for, STAAD.Pro V8i can easily accommodate your design and loading requirements, including U.S., European (including the Eurocodes), Nordic, Indian, and Asian codes. Even special codes like AASHTO, ASCE 52, IBC, and the U.S. aluminum code can be catered to.

Extremely Flexible Modeling Environment
The power of STAAD.Pro V8i is in an interface that is based on the latest programming technology, which means that 80% of new users learn to use STAAD.Pro V8i efficiently in under two hours. Along with our tutorial movies, we include online help and dozens of examples to illustrate solutions to commonly raised modeling, analysis, and design issues.

Broad Spectra of Design Codes
Steel, concrete, timber and aluminum design codes from all around the world including a number of historical codes means that you can take STAAD.Pro V8i to wherever your company works.

Interoperability and Open Architecture
STAAD.Pro V8i is more than an analysis and design tool. From simple importing of CAD models to custom links to third-party applications using OpenSTAAD, it can be the heart of your structural solution. When integrated with ProjectWise® V8i, your STAAD.Pro V8i models can be efficiently managed with the leading project collaboration system.

Quality Assurance
STAAD.Pro V8i is the only software that has gone through ISO 9001 certification and has passed the stringent software validation requirements of the nuclear industry (10CFR Part 50, 10CFR 21 and ASME NQA-1-2000).
STAAD.Pro V8i At-A-Glance

User Interface
- Graphical tools. Models can be created quickly and accurately using structural grids, tooltips to highlight data, frame generators and a structure wizard for standard structural frames.
- Visualization. From simple wire frames for speed, accuracy and ease of use to fully rendered 3D models for clear mass distribution and presentation.
- Editor. A color-coded tool to check and organize the data, label with comments and organize to model stage construction.
- Section Wizard. Calculate properties of built-up sections, drawn freehand, parametrically defined, or imported from a CAD drawing.
- Meshing tools. Triangular or quadrilateral meshes created from zones within defined models or imported from DXF files.
- Load generators. Seismic UBC, IBC, ASME wind and snow, bridge loading BEAVA.
- Customizable interface with VBA tools. Create windows and tables to your own specifications. SQL query builder.

Analysis
- Elastic. Traditional first-order including iterative one-way analysis.
- P-Delta. Both large and small P-Delta including stress-stiffening effects.
- Cable. Account for the changing stiffness of cables due to loading.
- Imperfection. Account for imperfections in structural geometry.
- Dynamic. Modal analysis including stress-stiffening eigensolution and steady-state options, Time History and Response Spectrums.
- Buckling. Identify the eigen buckling factor.
- Basic and Advanced Solvers. The standard solver, the staple of STAAD® for over 20 years is now complemented by an advanced solver that can be up to 1000 times faster.
- Code Checking and Design.
- Steel, 37 codes from around the world.
- Concrete, 25 codes batch processed or within the interactive RC design modes.
- Timber, 4 design codes supported.
- Aluminum design.
- Shear wall designs for US, Indian and British codes.

Post Processing
- Pages. The STAAD.Pro V8i interface is configured to suit the model to ease access to the required data.
- Interactive graphics. Linked tables and windows to get direct feedback from one item in related windows.
- Output file. Simple clear information to verify the analysis.
- Contoured stress plots. Using automatic or user-configured scales, colors and limits.
- Animations. View displacements, stress contours or mode shapes dynamically.

Interoperability
- Structural Modelers V8i. Two-way link to support creating models with design and construction documents.
- Bentley® REBAR V8i. Reinforced concrete designs passed into Bentley REBAR for complete scheduling and detailing.
- RAM™ Concept V8i. Floor slabs can be identified and linked to RAM Concept for full RC and PT design and detailing in a state-of-the-art application.
- RAM™ Connection V8i. Joints defined in the model with the forces calculated from the analysis can be passed into the leading connection design application.
- AutoPipe® V8i. Pass the STAAD.Pro V8i structural steel frame into AutoPipe V8i to correctly account for the pipe support stiffnesses and import the pipe engineers support reactions back into the model for an accurate design in a fraction of the time of traditional methods.
- STAAD.foundation V8i. Import the STAAD.Pro V8i support reactions and positions directly to design the structure foundations.
- OpenSTAAD. A complete set of functions that make OpenSTAAD an API from which data an be extracted directly into applications such as Microsoft Word or Excel or your own application. You can even drive STAAD.Pro V8i creating models, run the analysis and view the result with your own interface.
- CAD, DXF. Use CAD models as the ASE wire frame, structural grid or outline of a complex deck that needs to be meshed.
- CIS/2. Exchange data with other steel design packages.

Graphical post-processing and linked windows to cross reference results data.  Pipe work designed in AutoPipe V8i can be imported and graphically linked to the structure to import the loading.
